**CASE STUDY
ENROLLMENT ENCLOSED**

You Should Hear What You've Been Missing!

Is your memory problem a sign of **Alzheimer's** or is it a... **hearing loss?**

A study by **Johns Hopkins University** found:

- *People with hearing loss, had a greater incident of dementia.*
- *Degraded hearing may also force the brain to devote too much of its energy to processing sound, at the expense of memory and thinking.*
- *Adults with hearing loss develop dementia 3.2 years sooner than those without.*

You Cannot remember what you do not hear!

A diagnostic hearing test is a great place to start. Let us educate you on your particular type of hearing loss so you have a clear understanding of the best way to treat your hearing?

Isn't it time to discover for yourself?
